

PROVEN RELIABILITY IN PHOSPHATE PRODUCTION

Since 2013 and 2016, two Ferrum P-50/2 pusher centrifuges have been in fully automated operation at a European fertilizer plant, producing crystalline monoammonium phosphate. Both units were delivered on time, met all specs, and continue to perform reliably.

”

We have been operating two pusher centrifuges P-50/2 for water-soluble crystalline monoammonium phosphate since 2013 and 2016. The centrifuges were delivered on time and according to specifications and have been in completely automatic operation since then. They fully meet the performance parameters and have proven highly reliable.
