

PILOT CAMPAIGN SUCCESS WITH FERRUM REMOTE SERVICE

During a pilot campaign in early 2021, KBR Plinke successfully tested a new product on a Ferrum rental centrifuge. Despite Covid restrictions, all test phases were supported remotely by Ferrum experts – flexibly, reliably and on schedule.

”

In Q1 2021, we ran an 8-week pilot plant campaign using a Ferrum rental centrifuge to test a new product. Travel restrictions made on-site support impossible – but Ferrum’s Remote Service proved highly effective. A process engineer guided us through configuration, commissioning, and test runs remotely. The machine met all quality and performance targets on time. We strongly recommend this flexible service solution.
